**SECTION I - SPECIAL NOTICES**

This section contains information of special concern to the Mariner.

---

**NOTICE OF PLATFORMS, DRILL RIGS AND ATTENDANT VESSELS**

The drill rigs and vessels that have been temporarily established will display lights and sound signals, according to size or class, during periods of darkness and reduced visibility. Numerous large anchor buoys which may be lighted displaying a white 4-seconds characteristic light and unlighted buoy may be established up to 2,000 or more yards from the vessel or rig site. Mariners should avoid passing close aboard the rigs or vessels. Offshore structures that have been established will display lights and a fog signal sounding 1 blast (2-sec. blast) every 20-seconds. Mooring buoys (white with blue band) may be located within 500 yards of the structure for mooring attendant vessels and/or barges. Mariners should avoid passing close aboard structures.

**GPS TESTING**

At times, throughout our area or responsibility, multiple U.S. Government Agencies conduct GPS testing. These tests vary in duration, affected range from the test site and potential impact to the maritime user as they may affect systems that rely on GPS such as E-911, AIS and DSC. More information is available at the U.S. Coast Guard Navigation Center Website, <https://www.navcen.uscg.gov>. During these periods, GPS users are encouraged to report any GPS outages that they may experience, to the Navigation Information Service (NIS) by calling (703) 313-5900 or by using the NAVCEN Website to submit a GPS problem report.

**SUNSET OF NOAA PRINTED CHARTS**

\*\*\*\* Cancellation of NOAA Paper and Raster Nautical Charts \*\*\*\*

The National Oceanic and Atmospheric Administration (NOAA) is undertaking a multi-year program to end production and maintenance of its suite of over 1,000 traditional paper nautical charts and all associated raster chart products and services, including: Print-on-Demand (POD) paper nautical charts, Full-size chart PDF files, BookletChart™ PDF files, NOAA raster navigational charts (NOAA RNC®), the NOAA RNC tile service, and the online RNC viewer. Six months notice of the intent to cancel a specific chart is provided in a "Last Edition" notice. The final cancellation of a chart is made in a "Canceled" notice. Both types of notices will appear in LNM Section IV, "Chart Correction". A comprehensive list of all canceled NOAA charts is available at: <http://www.charts.noaa.gov/MCD/Dole.shtml>. Traditional paper nautical chart production is ending to enable the creation and maintenance of larger scale, more up-to-date, higher quality coverage of NOAA's electronic navigational chart (NOAA ENC®) product. This will significantly enhance the amount of charted detail available to mariners. More information about NOAA's program to sunset traditional paper charts is on the NOAA Coast Survey website at:

<https://nauticalcharts.noaa.gov/charts/farewell-to-traditional-nautical-charts.html>

An online NOAA Custom Chart application at: <https://devgis.charttools.noaa.gov/pod> is available to create chart images from ENC data, which may then be printed. Notices to Mariners will not be issued for NOAA Custom Charts.

**LA - MISSISSIPPI RIVER - Old River Lock**

Continuing until approximately July 31, 2023, due to repairs on the Lock Emergency Bulkhead Lowering Carriage, and the procedures contained in this bulletin, tows entering the Lock are urged to use extreme caution while approaching and entering the lock chamber. While approaching the Lock, the following are required for passage:

1. Tows are to enter the Lock at DEAD SLOW speed.
2. All tows are restricted to no longer than 1,100 feet in length.
3. All tows will line up along the floating guidewall before proceeding.
4. Two line-handlers with life vests and bumpers will be required on both approach and exiting of the Lock.
5. Vessels must be moored by bow and stern lines to floating timberheads.

Again, use extreme caution when locking through Old River Lock. The Lockmaster, Anthony T. Lindsly, can be reached at (225) 492-3333, for up-to-date information. The point of contact with the USACE New Orleans District is Russell Beauvais, at (225) 492-2169.

**FL/AL/GA - APALACHICOLA - CHATTAHOOCHEE AND FLINT (ACF) RIVER SYSTEM - UPDATE**

In accordance with Section 7-11 of the Apalachicola, Chattahoochee and Flint (ACF) Master Water Control Manual and the Jim Woodruff Lock and Dam and Lake Seminole Water Control Manual (Appendix A), dated March 2017, a 7-foot navigation channel will be supported via water releases on the ACF during the months of January 2023, through May 2023, when the composite storage for the system is in Zones 1 and 2. Below is a link to a graphic showing the ACF composite storage in Zone 1, indicating sufficient water is available to continue supporting navigation. The composite storage graphic, which is updated weekly, can be viewed at the following website:

<https://water.sam.usace.army.mil/ACFconstorage.pdf>. A 7.4-foot Blountstown Gauge is needed to provide a 7-foot channel on the Apalachicola River. River stages for the ACF system can be viewed at: [https://water.sam.usace.army.mil/forecast\\_acf\\_plots.htm](https://water.sam.usace.army.mil/forecast_acf_plots.htm). Mariners should schedule lockage appointments at the Jim Woodruff Lock by calling (850) 663-4692 or (229) 723-3482. George W. Andrews and Walter F. George Locks remain closed due to mechanical failures. Navigation Bulletins will be issued on a monthly and as-needed basis throughout the navigation season. For further information or questions, mariners can contact Ashley Kleinschrodt, at (251) 694-3726.

**SAFETY NOTICE - NAVIGATIONAL RANGE AND SECTOR LIGHTS ON ELECTRONIC CHARTS**

The U.S. Coast Guard has become aware that the Range and Sector Light Characteristic labels are not displayed on Electronic Navigational Charts (ENCs) when used in an Electronic Chart Display and Information System (ECDIS), due to limitations of the S-52 ECDIS, display specification. Mariners may query the ENC data directly within ECDIS or refer to the Light List for complete information on Range and Sector Light Characteristics.

## SECTION IV - CHART CORRECTIONS

This section contains corrections to federally and privately maintained Aids to Navigation, as well as NOS corrections.

This section contains corrective actions affecting chart(s). Corrections appear numerically by chart number, and pertain to that chart only. It is up to the mariner to decide which chart(s) are to be corrected. The following example explains individual elements of a typical chart correction.

Chart Number	Chart Edition	Edition Date	Last Local Notice to Mariners	Horizontal Datum Reference	Source of Correction	Current Local Notice to Mariners

**LA - MORGAN CITY TO PORT ALLEN ALTERNATE ROUTE - Channel Condition**

The Atchafalaya River Gauge has reached and is forecasted to remain above 3.0 feet. In accordance with 33 Code of Federal Regulations (CFR) 165.811, the following highwater restrictions are in place for the designated regulated navigation area that encompasses the Atchafalaya River in the vicinity of the Morgan City Triple Span Bridges (the bridges), including the waters extending 2,000 yards north of the Highway 90 Bridge and 4000 yards south of the Morgan City Railroad Bridge. For these restrictions, length of tow indicates length and width of the barges, excluding length of towing vessel.

Towing on a hawser is not authorized, except that one self-propelled vessel may tow one other vessel without barges northbound.

Max length of tow remains 1,180 feet when transiting the bridges.

Max length of double wide tows (70 feet wide) remains 600 feet when transiting the bridges.

Tows with a loaded box in the lead must not exceed 600 feet in length.

Tows with an empty box in the lead must not exceed 1,180 feet in length.

Minimal available horsepower requirements in accordance with 33 CFR table 165.811(e) are in effect.

A 5% variance from the available horsepower is authorized.

Towing certain dangerous cargo barges as defined in 33 CFR 160.202, shall have at least 600 horsepower available or three times the length of tow, whichever is greater.

Use of assist boats to meet required horsepower criteria:

North and southbound tandem tows shall have at least 50% of the required horsepower wired-in when transiting the bridges. Once the condition is met, an assist boat may be used to make up the remaining horsepower deficit.

North and southbound double wide tows shall have at least 75% of the required horsepower wired-in when transiting the bridges. Once that condition is met, an assist boat may be used to make up the remaining horsepower deficit.

To comply with this requirement, tows must ensure the assist boat is ready and in position to provide immediate assistance throughout the entire transit through the regulated navigation area.

Mariners shall use extreme caution when transiting the Wax Lake Outlet, due to high abeam currents. All mariners unfamiliar with this transit should consider using an assist vessel. Navigating vessels in high water conditions increases the risk of casualties. Mariners are reminded of their ongoing responsibility to conduct and manage their required navigation assessments and voyage plans to prepare bridge teams for encountering known hazards. Vessel operators are strongly encouraged to continuously evaluate the experience of their mariners operating in high water conditions and consider ensuring more experienced wheelmen are on watch during critical stages of the voyage or using "posted" wheelmen to transit through high-risk areas. For further information on this advisory, mariners can contact Vessel Traffic Service Berwick Bay, at (985) 380-5370 or via VHF-FM Channel 11. # SL-B700 Float Collar Buoy

Regulatory and Channel/Navigation Markers

The SL-B700 Buoy is rotationally-molded in one piece from strong, durable UV-stabilized polyethylene and is filled with closed-cell polyurethane. It is available in three different configurations: a red nun and green can navigation buoys, as well as a regulatory style buoy, which meet federal, state, and local requirements. A large mooring attachment point accommodates a 5/8 inch (16mm) shackle or 1/2 inch (12mm) cable.

Sealite's SL-B700 Buoy incorporates stainless steel interconnected mooring and lifting eye (see below) for additional strength while being deployed and retrieved. The top section has three threaded M6 inserts, molded into the buoy to allow easy mounting of the SL-60 Large Base or SL-70 2-3NM Marine Lanterns.

Regulatory signage and custom graphics are available, which will hold up under heavy UV exposure without peeling and fading. Vinyl wraps and decal restoration kits are also available to repurpose older buoys (see back).

**Above:**  
SL-B700 is available in green can and red nun style for channel marking configurations (shown in region B colors)

# 1-2NM+ Solar Marine Lantern

SL-15

The equipment complies with requirements of the U.S Coast Guard in 33 CFR part 66 for private aid to navigation and 33 CFR part 88.15 for lights on dredge pipelines

The Sealite SL-15 1-2NM+ compact LED light is exceptional value and incorporates some of the most advanced technology available. In the tradition of Sealite lanterns, the SL-15 is designed to be maintenance-free and have a service life of over 5 years.

The SL-15 can be installed in minutes and requires no operator intervention. The SL-15 has a rotary switch to allow users to change the flash character of the light without the need for special tools or programmers.

During daylight hours the solar module will charge the battery, and the lantern will automatically begin operation at dusk – once the ambient light threshold drops sufficiently.

The SL-15 features Sealite's Single LED Optic which boasts exceptional power to light output efficiency. The tough outer polycarbonate lens incorporates an environment-friendly spike – deterring unwelcome bird life.

The internally housed battery is user-replaceable after years of reliable service.

The unit is sealed using advanced UV-sealing, enabling a rugged and complete waterproof seal capable of prolonged and deep immersion (IP68).

## Optional ON/OFF Switch

The SL-15 is also available with an optional ON/OFF switch for temporary installations such as worksites.

## User Advantage

- User-adjustable flash characters
- User-replaceable battery in sealed battery compartment
- Installs in minutes & operates maintenance-free for up to five years

## Reliable

- Completely sealed & self-contained using advanced UV-sealing
- IP68 waterproof
- NiMH battery for long service life & wide temperature range

## Cost Effective

- Solar Powered
- ## Optional

Subject: Notice to Mariners  
Reference: **Houston Ship Channel (HSC) & Bayport Ship Channel (BSC) Expansion Channel Improvement Project (ECIP) Project 11: REDFISH TO BAYPORT HSC STA 78+844 TO HSC STA 16+000 & BAYPORT SHIP CHANNEL**

Mariners:

Curtin Maritime request that a Notice to Mariners be posted regarding our dredging operations in the Houston Ship Channel from approximately channel marker G-75/R-76 to G-71/R-72.

Please be advised that Curtin Maritime (CMC) will be conducting dredging activities commencing on or about December 15, 2022 and conclude on or about May 3rd, 2023. Sediment will be dredged within the main ship channel and existing barge lane and will be loaded into scows. The mechanical clamshell dredge, DB Avalon, will be utilizing spuds without any anchors and does not have any associated dredge pipeline.

From approximately Dec 15, 2022 to Feb 21, 2023, scows will be pushed directly from the DB Avalon to the San Leon oyster mitigation site located at 29d 31.602000' N, 094d 57.52920' W. From approximately Feb 21, 2023 to Apr 16, 2023 the scows will be pushed from the DB Avalon in the HSC utilizing the barge lane, where possible, to the vicinity of light 45. The tug will take the scow within 300ft outside of the western toe of the main ship channel and swap the loaded scow to shallower draft tugs. The shallower draft tugs will pass a light scow to the larger tug to take back to the DB Avalon and the loaded scow will be transported to the Dollar Reef oyster mitigation site located at 29d 26.899043' N, 094d 53.128969' W.

The mitigation sites at San Leon & Dollar Reef will be visually marked with PVC poles indicating that an oyster pad is under construction with tugs and split-hulled dump scows placing material into the sites periodically. Each pad is staked at 200ft intervals along the perimeter and each stake will be marked with hi-vis paint and reflective tape. It should be noted that the oyster pads may contain areas of shallower than normal draft restrictions while material is being placed prior to being leveled, and all boaters should avoid the mitigation sites until construction is completed.

Bed levelling operations at the oyster pad sites will commence on Feb 2, 2023 and should commence on or about April 30, 2023. The bed levelling will be conducted using an oyster boat dredge and well as a barge mounted A-frame drag bar pushed by a tugboat.

From approximately Feb 15, 2023 to May 31, 2023, a placement barge, DB Ironbound, will be located at the San Leon oyster mitigation site placing material. Then the placement barge will relocate to Dollar Reef oyster mitigation site on approximately May 31, 2023 and conclude operations on or about July 12, 2023.

Our fleet for this operation will consist of:

CMC will be operating 24 hours per day / 7 days per week (Monday through Sunday). Mariners are urged to transit at their slowest safest speed to minimize wake between lights 43/44 and 47/48 while a scow swap is occurring. While approaching the DB Avalon, mariners are urged to proceed with caution after passing arrangements have been made.

All manned equipment will monitor VHF-FM Channels 13, 11 and 05A. The dredge DB Avalon can be reached by phone at (562) 600-9854. Our Project Manager, Mr. Mike Patria can be reached at (630) 418-1190.
